TRAININGS / CERTIFICATIONS

Full Stack Development Intern

Jun 2024 - Nov 2024

Slog Solution, Dehradun

In slog solution we were taught about how we can build full stack websites ready for the market as per the demand of customer. We were made to work in different technology like React, Node.js, Express.js, MongoDB. We learned to manage our time and how to cope up with the demand of the customer regarding what features he want in the website

PORTFOLIO

[Blog link ↗](#)

PROJECTS

[MyMoney ↗](#)

Apr 2025 - May 2025

MoneyX is a secure and modern web application that enables users to send and receive money, similar to Paytm. Built with a full-stack JavaScript architecture using React, Express.js, MongoDB (with transaction support), and styled using Tailwind CSS.

[BLOGIFY ↗](#)

Jan 2024

Blogify is a dynamic and responsive blogging platform designed to provide users with a seamless and engaging blogging experience. The application is built using React for the front end, Express.js for the back end, and MongoDB for the database. Blogify allows users to create, edit, and delete blog posts, comment on posts, and interact with other users. The goal is to deliver a user-friendly interface with robust functionality to support a thriving blogging community.

[Food App ↗](#)

Jun 2023

Mr.Chef

Welcome to Mr. Chef, the food app that elevates your dining experience to new heights. As the creative force behind the captivating product page, I ensured that users were enticed by a visually enticing interface that flawlessly displayed an array of delectable food items.
